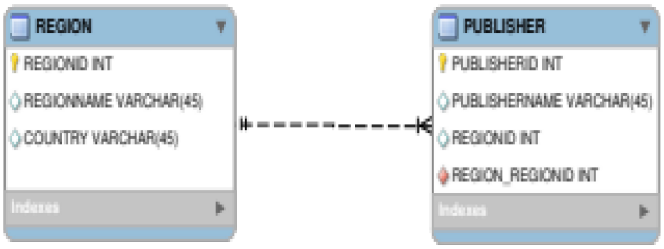
Q1. A publishing ecosystem stores details of **Regions** and **Publishers**. Each **Publisher** operates in exactly one **Region**, but a **Region** can have many **Publishers**. Draw the ER diagram and show cardinalities.

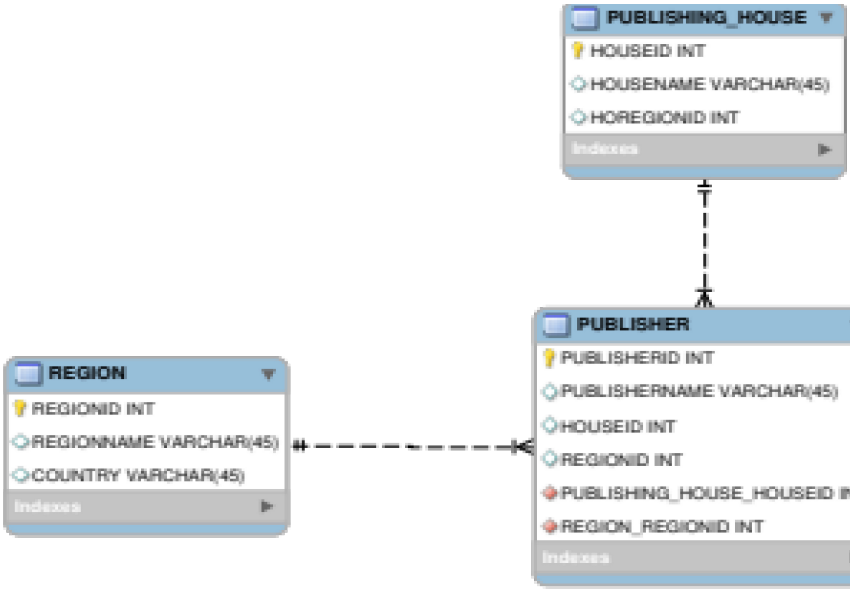


Tables:

REGION(RegionID PK, RegionName, Country)

PUBLISHER(PublisherID PK, PublisherName, RegionID FK)

Q2.A **PublishingHouse** owns multiple **Publishers** (imprint companies). Each **Publisher** belongs to exactly one **PublishingHouse**. A **PublishingHouse** may operate across multiple **Regions** via its publishers. Draw the ER diagram.



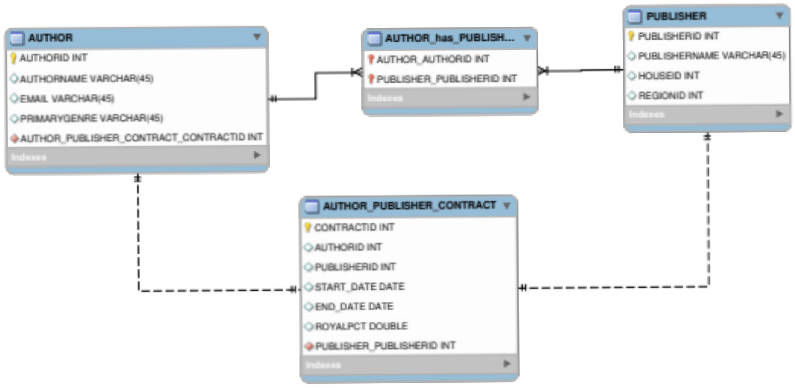
Tables:

REGION(RegionID PK, RegionName, Country)

PUBLISHING_HOUSE(HouseID PK, HouseName, HQRegionID FK)

PUBLISHER(PublisherID PK, PublisherName, HouseID FK, RegionID FK)

Q3.Authors can sign contracts with multiple **Publishers**, and each **Publisher** can contract multiple **Authors**. For each contract, store start date, end date (nullable), royalty percentage. Draw ER with associative entity.



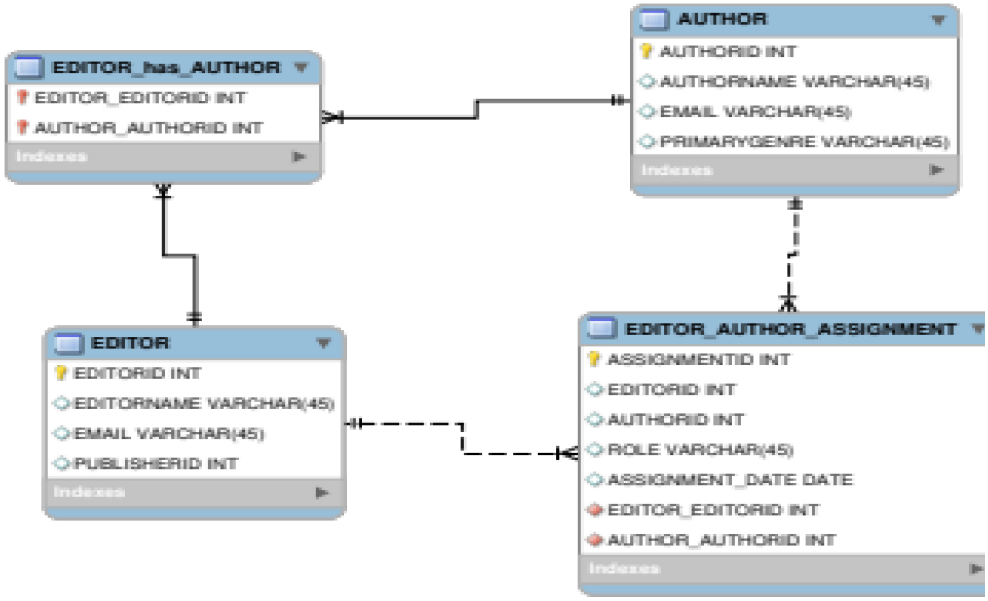
Tables:

AUTHOR(AuthorID PK, AuthorName, Email, PrimaryGenre)

PUBLISHER(PublisherID PK, PublisherName, HouseID FK, RegionID FK)

AUTHOR_PUBLISHER_CONTRACT(ContractID PK, AuthorID FK, PublisherID FK, StartDate, EndDate, RoyaltyPct)

Q4.Each **Editor** works for exactly one **Publisher**. An **Editor** can be assigned to multiple **Authors** (to manage their publications for that publisher), and an **Author** may have different editors at different publishers. Each assignment has Role (Lead/Assistant) and AssignmentDate. Draw ER with constraints.



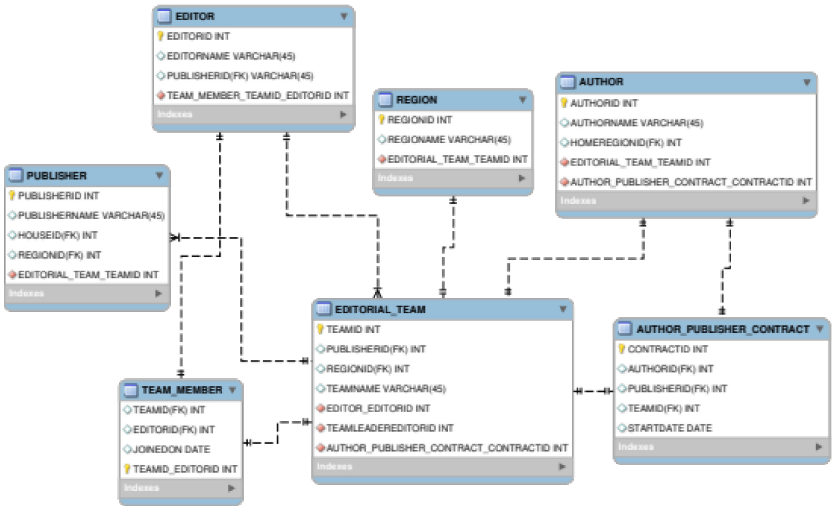
Tables:

EDITOR(EditorID PK, EditorName, Email, PublisherID FK)

AUTHOR(AuthorID PK, AuthorName, Email, PrimaryGenre)

EDITOR_AUTHOR_ASSIGNMENT(AssignmentID PK, EditorID FK, AuthorID FK, Role, AssignmentDate)

Q5.A **Publisher** forms **EditorialTeams** per region for localization. A team belongs to one publisher and one region. Editors can be members of multiple teams; each team has exactly one TeamLead (who is also an editor). Authors are assigned to a team (not directly to an editor) for that contract. Draw ER diagram



Tables:

EDITOR(EditorID PK, EditorName, PublisherID FK)

REGION(RegionID PK, RegionName)

PUBLISHER(PublisherID PK, PublisherName, HouseID FK, RegionID FK)

EDITORIAL_TEAM(TeamID PK, PublisherID FK, RegionID FK, TeamName, TeamLeadEditorID FK)

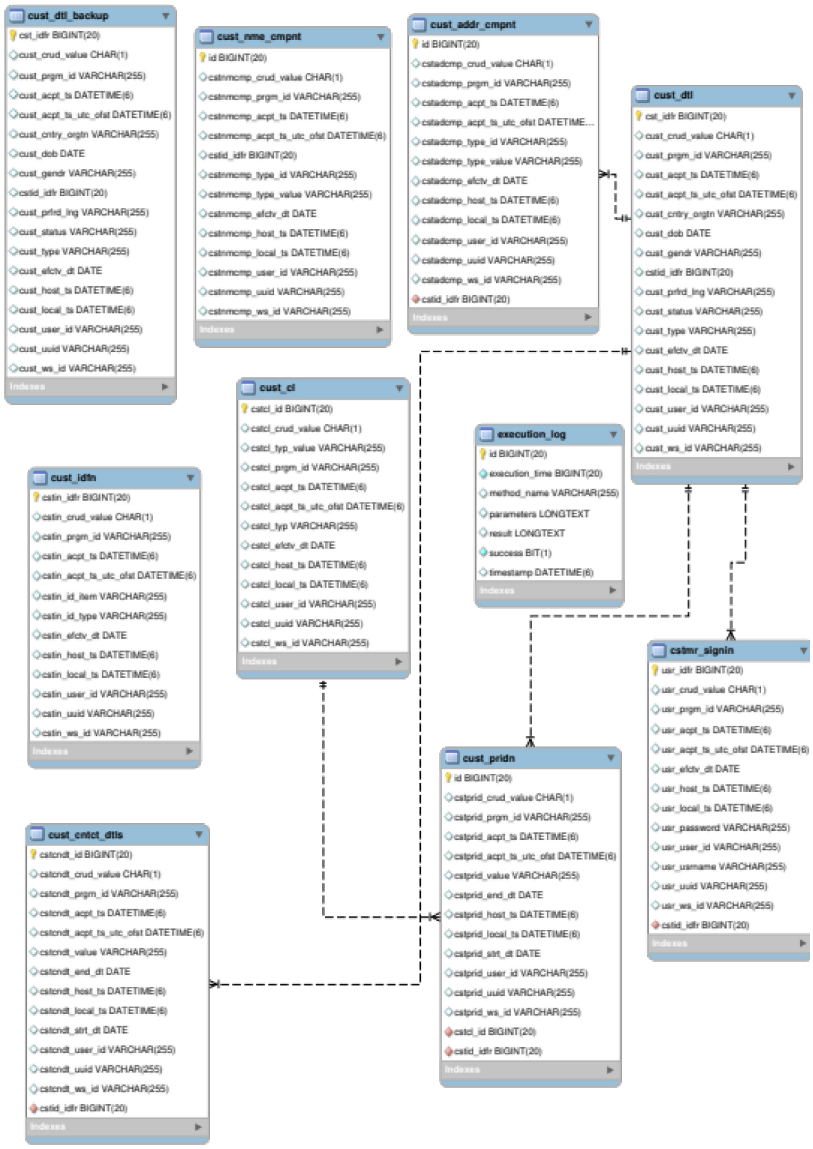
TEAM_MEMBER(TeamID FK, EditorID FK, JoinedOn, PK(TeamID, EditorID))

AUTHOR(AuthorID PK, AuthorName, HomeRegionID FK)

AUTHOR_PUBLISHER_CONTRACT(ContractID PK, AuthorID FK, PublisherID FK, TeamID FK, StartDate, RoyaltyPct)

Q6.Lab Activities

1. Design an ERD/LDM for the above entities.



3. Create Schema and tables SQL’s, also create the DDL scripts for table creation

Done in sql file

4. DML Operations on table created - SELECT, UPDATE and DELETE

Dome in sql file
