

Deployment Report: Angular + Spring Boot on Azure

Name: Ihit R Acharya
Roll No: 48
Reg No: 240958198
Class: Fintech-A

1. Frontend Setup and Build

Installed dependencies and built Angular app for production.

```
npm install  
npm run build
```

2. Backend Preparation

Verified Spring Boot backend locally and ensured APIs worked.

```
mvn clean package  
java -jar target/lab4-0.0.1-SNAPSHOT.jar
```

3. Frontend Integration

Copied Angular build into Spring Boot static directory.

```
rm -rf src/main/resources/static/*  
cp -r dist/customer-ui/browser/* src/main/resources/static/
```

4. Migration from MySQL to H2

Replaced MySQL with H2 to simplify deployment and remove external DB dependency.

```
spring.datasource.url=jdbc:h2:mem:testdb  
spring.datasource.driverClassName=org.h2.Driver  
spring.jpa.hibernate.ddl-auto=update
```

5. Azure Resource Setup

Created Azure resources using CLI.

```
az login
az group create --name lab11-12-rg --location centralindia
az appservice plan create --name lab4-plan --resource-group lab11-12-rg --sku B1 --is-
az webapp create --resource-group lab11-12-rg --plan lab4-plan --name my-app-w11-12-ih
```

6. Deployment

Deployed JAR and later used ZIP deployment for reliability.

```
az webapp deploy --resource-group lab11-12-rg --name my-app-w11-12-ihit --src-path tar
zip app.zip lab4-0.0.1-SNAPSHOT.jar
az webapp deploy --resource-group lab11-12-rg --name my-app-w11-12-ihit --src-path app
az webapp config set --resource-group lab11-12-rg --name my-app-w11-12-ihit --startup-
```

7. Debugging

Used logs to diagnose startup issues and fixed deployment path problems.

```
az webapp log tail --resource-group lab11-12-rg --name my-app-w11-12-ihit
az webapp restart --resource-group lab11-12-rg --name my-app-w11-12-ihit
```

8. Final Verification

Verified UI, API endpoints, and routing after deployment.

Conclusion

The deployment involved building the frontend, packaging the backend, configuring Azure resources, and resolving runtime issues. Final deployment successfully served both frontend and backend from a single Spring Boot application.
